

**Scenic Eclipse Progress Report**

In order to keep our guests up to date on the progress of the building of the *Scenic Eclipse*, Scenic Luxury Cruises & Tours will place periodic updates on this site as we continue to move closer to the August 15, 2019 launch.

April 11, 2019 – We are very pleased to report that build progress in all areas of the *Scenic Eclipse* has been moving along quite well since early January.

We did have to deal with a weeklong shipyard workers' strike that took place at the end of March, resulting in a near halt to work onboard. Although this strike did not involve any of the workers assigned to the *Scenic Eclipse*, it did cause a delay in some commissioning works and our movement to the dry dock. To make up for this short interruption, we have extended shifts during the week and increased weekend workers capacity in order to regain this lost time and are currently at full production. We are confident the build schedule will progress as planned and the *Scenic Eclipse* will launch on time.

The testing of the energy efficient and most modern cruise ship propulsion systems available (ABB Azipod) is showing excellent results. The *Scenic Eclipse*'s first sea trial is planned for the end of May and further updates will be given at that time.
